## LEAKAGE TEST EXHAUST SYSTEM

- The compact design of engines and vehicle components and the high boost pressure of current gasoline and diesel engines place a correspondingly high load on the charge air system.
- Our quality testing systems and tools facilitate fast, safe and technically correct leak testing of the charge air system and enable you to determine the location of the leak.

## AIR DISTURBANCE SIMULATOR

item number :  
SV 01 (130607\_1)

### DESCRIPTION

- A part of the exhaust gas test - the circuit test - is effected to guarantee that the Lambda probe is working correctly.
- By means of the adjustable disturbance air valve SV 01, a precisely measured quantity of disturbance air is introduced to the engine at a defined spot.
- The disturbance air with the SV 01 can be introduced from 0.0 to 2.3 mm.

## LEAKAGE TEST EXHAUST SYSTEM

item number :  
AGD 01 (130605)

### *DESCRIPTION*

- Overheating and dirt of a catalytic converter has negative influence on the emission of exhaust gases. The testing of the exhaust gas pressure allows a quick catalyst diagnosis.
- The connection is at the exhaust gas system between engine and catalyst by means of a thread connector instead of the Lambda probe.
- The connector can be coupled with the pressure hose.
- Gauge with protective rubber cap, DS 63 mm (2 1/2"), range -1...+3 bar, equipped with a red/green marked scale. When the indication remains within the green area, the catalytic converter is in order; however, if the catalyst is defective or propped, the indication is in the red area.

### *SCOPE OF DELIVERY*

- 1 compound gauge, 63 mm, -1...+3 bar,
- 1 pressure hose 3.00 m (10 ft) long,
- 1 connector M 18x1.5 (ANK 40, male)
- 1 solid plastic case

## LEAKAGE TEST EXHAUST SYSTEM

item number :  
ADP 01 (130608\_1)

### *DESCRIPTION*

- For leak testing of the exhaust system / exhaust tract
- Quick and easy identification and location of leaks
- The testing unit works with workshop compressed air supply and integrated pressure regulator
- The display is made by a manometer with measurement range 0...600 mbar
- A pressure drop indicates leaks in the exhaust system
- The leak is located by finding an air leak or using a leak spray.

## SCOPE OF DELIVERY

- 1 tester DPL 01
- 1 test and sealing adapter with hand wheel UA 4AG
- 1 test seal with hand wheel UA 4VK
- 1 test hose with quick-release coupling
- supplied in a solid plastic case
